Putting the Fun into Teaching the Circumference of Circles

This is a packet I made of hands-on learning activities, games, and worksheets to help students not just learn but understand pi, and the circumference. My intention is for it to be used as part of a "Math Journal" series, however it can stand alone as well. For a math journal, use the first page of each section as a "header page". The following is a list of items in the packet:

Math Journal section header page
Sir Cumference and the First Round Table explanation and worksheet
Sir Cumference and the Dragon of Pi explanation
"Dragons, and Medicine, and Pi, Oh My" hands on learning activity
Two circumference fortune tellers and recording sheets
I Have / Who Has circumference cards and recording sheet
Bubble Circumference Booklet
Circumference practice worksheet
Circumference of a Circle

Vocabulary

radius
diameter
circumference

www.fortheloveofteachingmath.com
This whole series of books by Cindy Neuschwander and Wayne Geehan is amazing!! Read this one to your students and then give them the following worksheet to keep in their math journal for reference. The book is great to help students remember vocabulary.
Sir Cumference and the First Round Table
by: Cindy Neuschwander
and Wayne Geehan

Name: ____________________

1. What is the name of the main character? ______________

2. What is the name of the mother? _______________________

3. What is the name of the son? __________________________

4. What did they name the distance across the circle and why? __________________________

5. What did they name the distance from the center to the edge of the circle and why? __________________________

6. What did they name the distance around the circle and why? __________________________
Sir Cumference and the First Round Table
by: Cindy Neuschwander
and Wayne Geehan

Name: Answer Key

1. What is the name of the main character? Sir Cumference

2. What is the name of the mother? Lady Di of Ameter

3. What is the name of the son? Radius

4. What did they name the distance across the circle and why? circumference, because Sir Cumference chose to keep the bark around the outside of the table.

5. What did they name the distance from the center to the edge of the circle and why? radius, because he may be small but he has tall ideas

6. What did they name the distance around the circle and why? diameter, because Lady Di of Ameter has a reach that is equal to the distance across the table.
Sir Cumference and the Dragon of Pi

This whole series of books by Cindy Neuschwander and Wayne Geehan is amazing!! This book is a great introduction to finding pi.

www.fortheloveofteachingmath.com
Dragons, and Medicine, and Pi, Oh My!

Materials Needed:
* a piece of string for each group, long enough to go around each of the circles, but doesn't stretch
* 1 calculator for each pair
* copy of circle worksheet
* copy of student handouts
* cm ruler

Instructions for Measuring the Circle

Place one end of the string on the outside edge of the circle and carefully run the rest of the string all the way along the outside edge of the circle. Mark the place on the string that meets the opposite end of the string by pinching it with your fingers. Lay the string out flat (still keeping your place on the string). Using a ruler, measure the part of the string that went around the outside of the circle to the nearest cm. Record your results on this page. Repeat these instructions for each circle.

www.fortheloveofteachingmath.com
Dragons, and Medicine, and Pi, Oh My!

Circle A
1. Put one end of your string on the outside edge of the circle. Carefully place the string all the way around the circle. Pinch the part of the string the meets up with the other end of the string you first placed on the circle.
2. Now see how many times that part of the string will go from one edge of the circle to the other, making sure to go through the center of the circle. How many times did it go across? _______________________
3. Using the centimeter side of your ruler, measure the part of the string that went around the outside of the circle and place your answer here.__________
4. Measure the distance across the circle making sure to go through the center._______
5. Divide the answer you got on #3 by the answer you got on #4.__________

Circle B
1. Put one end of your string on the outside edge of the circle. Carefully place the string all the way around the circle. Pinch the part of the string the meets up with the other end of the string you first placed on the circle.
2. Now see how many times that part of the string will go from one edge of the circle to the other, making sure to go through the center of the circle. How many times did it go across? _______________________
3. Using the centimeter side of your ruler, measure the part of the string that went around the outside of the circle and place your answer here.__________
4. Measure the distance across the circle making sure to go through the center._______
5. Divide the answer you got on #3 by the answer you got on #4.__________

Circle C
1. Put one end of your string on the outside edge of the circle. Carefully place the string all the way around the circle. Pinch the part of the string the meets up with the other end of the string you first placed on the circle.
2. Now see how many times that part of the string will go from one edge of the circle to the other, making sure to go through the center of the circle. How many times did it go across? _______________________
3. Using the centimeter side of your ruler, measure the part of the string that went around the outside of the circle and place your answer here.__________
4. Measure the distance across the circle making sure to go through the center._______
5. Divide the answer you got on #3 by the answer you got on #4.__________

www.fortheloveofteachingmath.com
Dragons, and Medicine, and Pi, Oh My!  Name:__________

1. What do you notice about all of the answers on #5 for each of your circles?__________________________

2. Are your answers similar to the number of times your string would go across the circle going through the center?__________________________

3. What statement could you make about the relationship between the distance around the outside of the circle and the distance across the circle going through the middle?__________________________

4. What term do we use to represent the outside edge around a circle?__________________________

5. What term do we use to represent the distance from one edge of a circle to the other edge of a circle that goes through the center?__________________________

6. What term do we use to represent that relationship between the distance around the outside edge of the circle and the distance across the center of the circle?__________________________

7. Can you give a formula that would calculate this measurement?__________________________
Folding Instructions

1. Cut out the square along the dark outside lines.
2. Place the square with blank side up.
3. Fold each corner into the center.
4. Flip the new square so that the flaps are resting on the table.
5. Fold the corners to the center again.
6. Fold the new square in half, one way and then open that fold and fold it in half the other way. (This will make it bend easier)
7. Put your fingers into the openings and "fortune tell" away.
8. Students work in pairs.
9. One student holds the fortune teller while the other one calls a number from the corner.
10. The student holding the "teller" opens and closes the "teller" the selected number of times and then holds it open on the last opening.
11. The student not holding the "teller" chooses one of the problems to work.
12. After giving the answer, they open up the flap to check the answer.

I Have / Who Has for Circumference of a Circle

The first five pages of I Have / Who Has cards leave the answer in terms of pi and the last five pages of cards multiply it out. I did this so that it would work for whatever skill you were working on.
I have the first card

Who has the circumference of the circle who's diameter is 4 in?

I have $8\pi$ cm

Who has the circumference of the circle who's radius is 3 ft?

I have $4\pi$ in

Who has the circumference of the circle who's radius is 1 ft?

I have $6\pi$ ft

Who has the circumference of the circle who's diameter is 10 km?

I have $2\pi$ ft

Who has the circumference of the circle who's diameter is 12 cm?

I have $10\pi$ km

Who has the circumference of the circle who's diameter is 16 in?

I have $12\pi$ cm

Who has the circumference of the circle who's radius is 4 cm?

I have $16\pi$ in

Who has the circumference of the circle who's radius is 4.5 ft?
<table>
<thead>
<tr>
<th>I have $9\pi$ ft</th>
<th>I have $12.2\pi$ cm</th>
</tr>
</thead>
<tbody>
<tr>
<td>Who has the circumference of the circle who's radius is 9.5 in?</td>
<td>Who has the circumference of the circle who's radius is 7 ft?</td>
</tr>
</tbody>

Bubble Circles Activity

For this activity you will need:
* bubbles
* construction paper
* ruler
* copy of the "bubble" booklet

---------------------

Students will blow a bubble or bubbles. Make sure to explain to them they only need one. They need to catch one bubble on the construction paper. When the bubble bursts, it will leave a dark circle from the liquid. They will then fill out the booklet that follows this page.
What is the measure of the bubble’s circumference?

2. What is the measure of the bubble’s radius?

1. What is the measure of the construction paper:
Catch a bubble on a piece of

The circumference of a circle:

The definition of

The Circumference of

Bubbles
Circumference of a Circle Worksheet

The following page is a worksheet with both guided practice and independent practice for finding the circumference of a circle. There are also three word problems on the bottom. The answer key is left in terms of pi, but the worksheet would work for either skill.

13. Ana and her friends went to the carnival. While looking at the ferris wheel, they estimated the distance from one side of the ferris wheel to the other side to be about 40 feet. If their estimation is correct, what would the distance around the ferris wheel be?

14. Jon is getting new tires for his bicycle. Jon wandered what the distance around one tire was. He measured the radius, and found it to be 7 inches. What is the circumference of his tire?

15. Phillip found the stump of a perfectly round tree. If the diameter of that stump was 25 cm, what is the circumference of the stump?
Circumference of a Circle

Guided Practice

Find the missing measurements.

1. \(d = 4\) in
   \(r = \frac{2}{1}\) in
   \(C = 4\pi\) in

2. \(d = 12\) cm
   \(r = 6\) cm
   \(C = 12\pi\) cm

3. \(d = 8\) ft
   \(r = \frac{4}{1}\) ft
   \(C = 8\pi\) ft

4. \(d = 18\) mm
   \(r = 9\) mm
   \(C = 18\pi\) mm

Independent Practice

Find the missing measurements.

5. \(d = 10\) in
   \(r = \frac{5}{1}\) in
   \(C = 10\pi\) in

6. \(d = 70\) in
   \(r = 35\) in
   \(C = 70\pi\) in

7. \(d = 42\) cm
   \(r = 2\) in
   \(C = 42\pi\) cm

8. \(d = 16\) in
   \(r = \frac{8}{1}\) in
   \(C = 16\pi\) in

9. \(d = 28\) cm
   \(r = \frac{14}{1}\) cm
   \(C = 28\pi\) cm

10. \(d = 122\) in
    \(r = \frac{61}{1}\) in
    \(C = 122\pi\) in

11. \(d = 40\) cm
    \(r = \frac{20}{1}\) cm
    \(C = 40\pi\) cm

12. \(d = 198\) cm
    \(r = \frac{99}{1}\) cm
    \(C = 198\pi\) cm

13. Ana and her friends went to the carnival. While looking at the ferris wheel, they estimated the distance from one side of the ferris wheel to the other side to be about 40 feet. If their estimation is correct, what would the distance around the ferris wheel be? \(40\pi\) ft

14. Jon is getting new tires for his bicycle. Jon wandered what the distance around one tire was. He measured the radius, and found it to be 7 inces. What is the circumference of his tire? \(14\pi\) in

15. Phillip found the stump of a perfectly round tree. If the diameter of that stump was 25 cm, what is the circumference of the stump? \(25\pi\) cm
